SUBJECT INDEX

aerodynamic characteristics
  blunt cylinder–flare body 15–17, 26
  bulbous base body 27–35, 40
  slender nose–cylinder body 20–24, 28–31, 38–39
  submerged cone–cylinder body 41–46
aerospace vehicles, flow separation effects 3
  Atlas–Able 3, 56
  Atlas–Agena 3, 57–59
  Gemini re-entry capsule 14–15
  Saturn 3, 65, 67, 68, 72, 73
  Saturn–Apollo launch vehicle 3, 4, 12, 18, 19, 53–56
  Seasat-A launch vehicle 57, 59, 60
  Space-Shuttle 20, 27, 40, 69–72
AGARD 155
aircraft noise, propeller *see* noise legislation
aircraft tires, braking performance
  hydroplaning 115–116
    analysis of 119–122
    critical speed 117–119
    visualisation of 122–123
  prediction of 138–145
    empirical methods 141–143
    ground vehicles 138–141
  tire design 115, 123
  tire–runway friction
    factors affecting 113–115
    mechanics of 106–109
    slip 109–112
  tire–runway research 132–138
    test facilities 133–138
  wet tire–runway contact 123–132
    antiskid brake control 124–126
    runway grooving 126–132
airworthiness *see* Concorde

BAST Cologne 137
Boeing 125, 135–137, 141, 157–158
braking performance *see* aircraft tires

certification *see* noise legislation
Committee on Aircraft Noise 241–247
Committee on Aviation Environmental Protection 247, 249
computational fluid dynamics 3, 173–182
Concorde, technical development
  aerodynamics 192–199
  airworthiness 199–200, 207, 230
  autopilot 212–213
  configurations 188–192
  control 199–200, 212–213
    center of gravity 202–204
    flying 200–201
    intake 222–230
    lateral 208–210
    longitudinal 206
  design 186, 192–199
  drag 192–199
  engine cycle 214
  flight envelope 199–200, 227
  fuel transfer 202–204
  intake 214–230
  low speed development 197–199, 207
  materials 230–232
  nozzle 216–222
  planform 189–191
  powerplant 190, 214–230
  stability 199–200, 204–206, 210–212
  structure 230–238
  thermal stresses 232–235

DFVLR Braunschweig 297–298
DNW Netherlands 297–298, 302–305
Douglas 157–158, 164

effective perceived noise level 334–339
EPFL 91, 92, 98, 101

FAA 126, 128, 136, 139–140, 144
flow separation
  base flow effects 27–49, 81
    support interference 27–39
    unrestricted flow 39–40
    wake flow 40–49
  flare-induced 17–19
  nose-induced 12–17, 81
    non-linear characteristics 15–17
    time-lagged 14–15
  shock-induced 17–27, 81
    cylinder–flare geometries 17–19
    reattachment 23–27
    time-lagged 19–20
  space vehicles *see* aerospace vehicles
  spike-induced 3–12, 80
    time-lagged 8–12
  sudden 23–27
  wake-submerged bodies 40–49
flow visualisation
  holographic methods, applications of
    annular turbine cascade 91–93
    boundary layer structures 101–103
    radial turbomachines 93
    rotating compressor 89–91
    steam turbine base flow 98–101
    transonic flows 93–97
  measurement techniques 86–88
    holographic 87–88
    laser fluorescence 86
    velocimetry 86–87
  smoke channel 168
  turbulent flow 170–171 *see also* shadowgraphs
fluid dynamics *see* flow separation
forebody cross-flow 29–30
friction, tire–runway *see* aircraft tires

holographic interferometry 87–103
hydroplaning *see* aircraft tires

ICAO ANNEX 16 *see* noise legislation

lasers, measurements involving
  fluorescence 86
  holographic interferometry 87–88, 89–103
  velocimetry 86–87
Lockhead 151–152, 157–158, 164–165

Max-Planck Institut 87
MIT 86

NAEC Lakehurst 128, 135
NASA 3, 59, 81, 82, 87, 88, 126, 127, 152
  Ames Research Center 55, 89, 153, 155
  Dryden Flight Research 162
  Langley Research Center 53, 55, 65, 127, 133–134
  Lewis Research Center 164
  Wallops Flight Center 134, 139–140
noise legislation, propeller aircraft
  acoustic data
    acquisition 255–256
    correction 256–258, 264–267
    reporting 259
  ANNEX 16 246–250, 251, 258, 260, 264
  categories of propeller aircraft 250–251, 310–311
  certification 241–245
    aeroplanes not exceeding 5700 kg 260–267
    aeroplanes over 5700 kg 251–260
    current procedures, evaluation 308–329
    proposed procedures 312–329
  Committee on Aircraft Noise (CAN) 241–247
  Committee on Aviation Environmental Protection (CAEP) 247, 279
  effective perceived noise level, calculation 334–339
  problems caused by noise 242–246
  reference noise 251–253, 260–264
  research 267–268
    flight testing 268–289, 339–342
    ground reflection effects 274–282
    noise data 289–296, 315–324
    noise signatures 282–289
    noise statistics 289–296
    propellers 298–308
    wind tunnel experiments 296–308

ONERA 186, 214

payloads, hammerhead 56–60
propeller aircraft noise *see* noise legislation
propfan 330–331 *see also* turboprop transport aircraft

RAE 186, 210, 234
runway
  contaminants 113–114, 143–144
  grooving 126–132
  maintenance 144, 146
  surface 114–115, 142–144
  tire contact *see* aircraft tires

separated flow *see* flow separation
shadowgraphs
  flair induced flow separation 79
  flow over Saturn-V launch vehicle 4, 7
  flow separation on Saturn booster 13, 68
  submerged body, wake source effect 42, 44
space shuttle
  effects on of flow separation 20, 27, 40
spiked-body geometry
  stability derivatives 11
sting interference *see* support interference
supersonic transport *see* Concorde
support interference
  resulting from base flow effects 27–39

time-lagged quasi-steady loads
  flow separation 8–12, 14–15, 19–20
tire–runway contact *see* aircraft tires
turboprop transport aircraft
  propfan
    systems 156–165
    technology 153–156, 164–165
turbulent fluid flow
  chaos theory 181–182
  coherent structures 171–172
  disturbance propagation 172–174
  equations of mean motion 167–168
  flow functions 179–181
  mixing length 169–170
  models 174–178
  stochastic concepts 170
  visualisation 170–171

vehicle dynamics
  elastic 49–72
    aerodynamic damping 52–60
    equations of motion 49–52
    experimental data 52–56, 65–69
    hammerhead payloads 56–60
    space shuttle configuration 69–72
    terminal shock–boundary layer interaction 61–69
  full scale, prediction of 72–80
    boundary layer transition effects 72–77
    extrapolation analysis 78–80
velocimetry, laser 86–87
Von Karman Institute 86

wake-submerged body, flow over *see* flow separation
Whittle laboratory 93, 97
